

AKG C414 B-ULS

Condenser, multi-pattern.

Description:

The AKG 414 B-ULS is a large diaphragm, transformerless condenser with four directional patterns and a two position bass roll-off filter.

Applications:

This mic has quite a large presence peak so it's not the best choice for already bright or edgy sounds. I've had very good results on both male and female vocalists, guitar cabinets, and drum overheads. This microphone is an all round good performer, producing good results on almost any source.
