

Neumann U67

Valve condenser, multi-pattern.

Description:

One of the most popular valve microphones, the Neumann U67 was first introduced in 1967. It is a large diaphragm valve microphone with three different directional patterns, a bass roll-off filter and a 10 dB pad. It has a transformer output.

Applications:

The U67 is a great classic sounding vocal microphone, favoured by many engineers for voice. The U67 is well-suited for use as a close mic on guitar cabinets. Much used as a room mic.
