

Oktava MKL2500

Valve condenser,
cardioid.

Description:

A collaboration between British and Russian designers, this vacuum tube (valve) condenser microphone uses a 33mm gold-sputtered cardioid capsule. Combined with a specially designed Powerblock the 6C315-P tube gives carefully controlled third-harmonic distortion to add brightness and warmth to most sound sources. The low noise and slight extra presence suit the microphone particularly for vocal use and digital recording.

Applications:

Lovely for guitar amps and anything that benefits the combination of a warm and crisp sound.
