

Sony C48P

Condenser, multi-pattern.

Description:

One of the more under-rated microphones, the Sony C-48P is a large diaphragm solid state FET microphone with three different directional patterns, a bass roll-off filter and a 10 dB pad. It has a transformer output.

This is one of Sony's top microphones and is serious competition for the Neumann U87 and TLM170R. It has a smoother response, without the same midrange accentuation as the Neumann.

Applications:

The C-48P is a great vocal microphone, and many people prefer it to the Neumanns, especially for female vocal. The C-48P is well-suited for use as a room mic and when used with a close mic on guitar cabinets. This is another great all round mic and performs well in any situation.
